

Draft information

version: draft-6.0

2019-05-15

Changes since the last draft

- Shortened abstract to required length
- Updated grant numbers in acknowledgements
- References are stored in its own repository (efcaguab/phd-references). Previously, references were accessed by pulling them as a submodule. This created problems when working from different computers. References are now just downloaded from the remote file in the github.
